

10 rodadas grãtis

How Are Bubbles Formed? Soap molecules are incredibly flexible and water molecules are stretchy! So together they create an incompressible, lightweight and stretchy soap film. When you blow into it this film, the soap and water molecules stretch out and trap the air inside creating a perfectly round bubble! Bubbles with the same color, you have 60 seconds to crush bubbles of the same color. Smash big groups and score a lot of points! Bubb Crush Game chrome.google.com/webstore/detail/...
